

OUR GOVERNANCE MODEL

KEY LOCAL CONSIDERATIONS

The national H2O association advises and provides support to the partner organisations cooperating on the creation of the Austrian Data Platform.

H2O Austria will encourage the establishment of a national H2O-ecosystem, and it shall additionally represent the interests of its members in the Pan-European H2O Observatory.

H2O Austria supports and facilitates the collection of health outcomes in Austria, with a special focus on patients' perspectives by providing education material, workshops, expertise for implementation of core outcome sets, analytic support, and expertise for publications.

The association will promote fair principles for the access to health outcomes data in Austria. It consolidates the interests of different stakeholder groups, including public and private sectors, regulators and authorities, and patients and citizens.

It will furthermore provide advice regarding sustainability of health outcomes data collection in a non-for-profit manner, including access to the H2O data platform.

WHO WE ARE:

Signing of the Articles of Association
9th of September 2022

LOOKING AHEAD

- Survey the interests of stakeholder groups, including patients
- Begin pilot collection of PROs
- Establish the Austrian H2O Data Platform

Feasibility Study Next Steps

IRB revisions submitted for H2O registry. Feasibility study protocol to be submitted next to assess registry. Preparation of centers underway to execute FS protocol.

Technology Next Steps

Transfer of relevant center data previously collected in RDA to H2O AT in process. Architecture blueprints in development to efficiently integrate multiple tech providers.

Upcoming events

- Invite additional members to the General Assembly
- Complete the Board of directors
- Launch event co-hosted by GÖG and MUW – 17th November
- Austrian Use Cases & Data Workshop being planned

WHAT PEOPLE ARE SAYING

“We are building something that could be long-lasting and truly meaningful. Step by step we will reach the top, just like Rocky.”
 “Patients carry tremendous knowledge. By tapping into it, H2O can demonstrate that in every visitation room, there are two experts.”
